#### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a person interview with attorney Thomas W. Humphrey on 7/20/09.

The application has been amended as follows:

In the claims:

9. (currently amended) A method for performing a filling sequence in a contrast media injector system that uses a fill tube coupling a syringe to contrast media supply to fill the syringe with a desired fill volume of contrast media, the method comprising:

attaching said fill tube to said syringe;

drawing contrast media into the syringe through the fill tube at a first fill rate;

thereafter, automatically expelling substantially all air from the fill tube by automatically reversing the first fill rate and expelling fluid from said syringe, wherein at least some of the contrast media is expelled through the fill tube during the expelling;

thereafter, filling the syringe at a second fill rate to fill the syringe with the desired fill volume of contrast media, wherein the second fill rate is faster than the first fill rate; and  
thereafter, injecting contrast media into a patient.

#### ***Allowable Subject Matter***

Claims 9-21, 23, 25-26, 28-29, and 32-101 are allowed.

The following is an examiner's statement of reasons for allowance:

The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination of a method for performing a filling sequence in a contrast media injector system that uses a fill tube coupling a syringe to contrast media supply to fill the syringe with a desired fill volume of contrast media

Art Unit: 3763

Regarding claims 9 and 12, the method comprising: drawing contrast media into the syringe through the fill tube at a first fill rate; thereafter, automatically expelling substantially all air from the fill tube by automatically reversing the first fill rate and expelling fluid from said syringe, wherein at least some of the contrast media is expelled through the fill tube during the expelling; thereafter, filling the syringe at a second fill rate to fill the syringe with the desired fill volume of contrast media; wherein the second fill rate is faster than the first fill rate.

Regarding claims 32 and 38, the method comprising: automatically drawing an initial volume of medical fluid into a syringe of a contrast media injector system at a first fill rate; after the drawing, automatically stop drawing and start expelling at least some of the medical fluid from the syringe; and thereafter, automatically stop expelling and start filling the syringe at a second fill rate that is faster than the first fill rate; wherein a total volume of medical fluid in the syringe after the filling is greater than the initial volume.

The closest prior arts of record are Duchon et al. (US 2004/0133165); Savege (US 2004/0158205) and Fago et al. (US 2004/0024361). However the references do not disclose the device as claimed or described above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
